

## Lab 2: Using SEED Labs Virtual Image

- SEED Labs image is a popular virtual image for several computer security related experiments.
- Download Ubuntu 20 image from the link  
<https://seedsecuritylabs.org/labsetup.html>

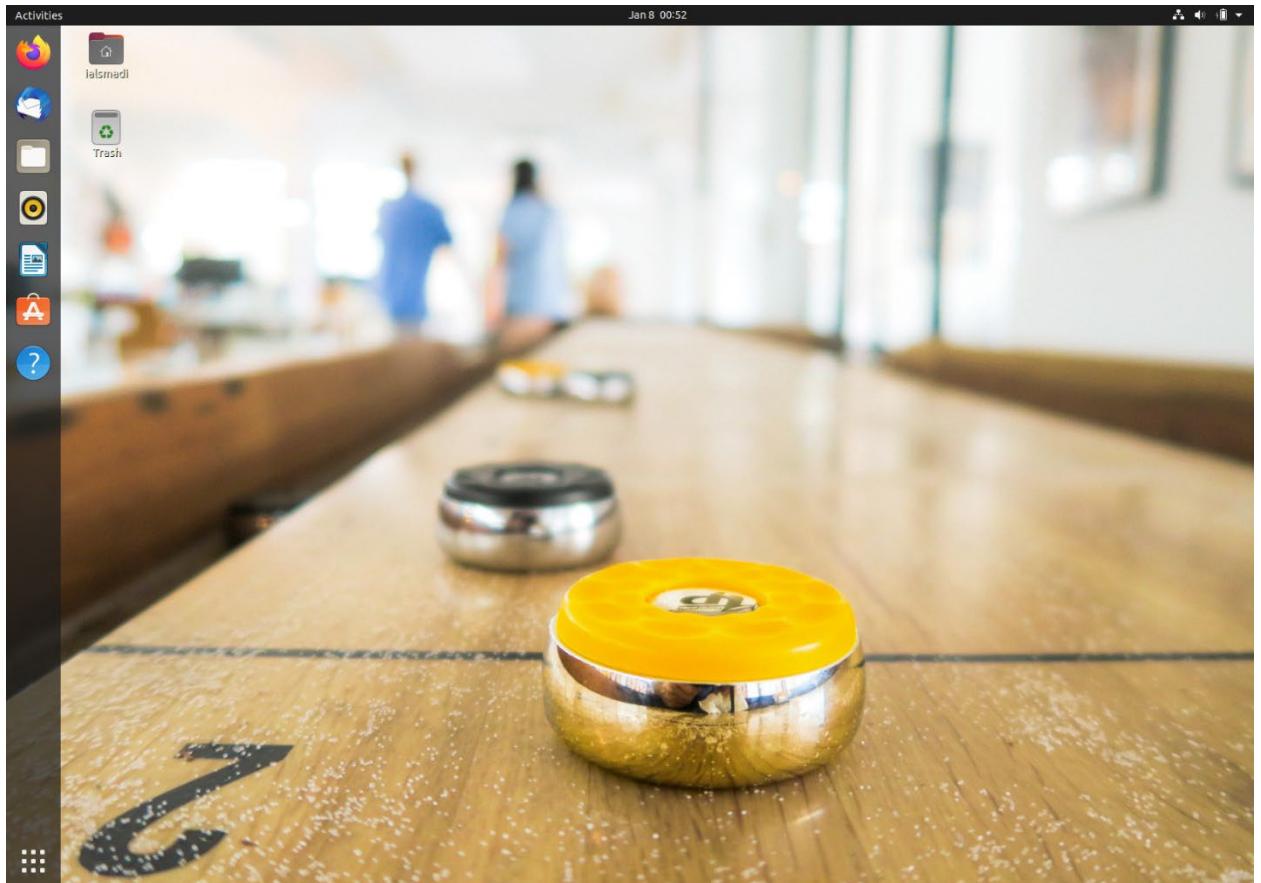

and show that you were able to eventually launch the image

Then find out how to create a user name in the image and create and forward use your own user name, first initial+last name

Use this user name for all future SEED labs

- For the rest of the lab, we will demo the first lab described in software security experiments (Shellcode development Lab)  
[https://seedsecuritylabs.org/Labs\\_20.04/](https://seedsecuritylabs.org/Labs_20.04/)  
[https://seedsecuritylabs.org/Labs\\_20.04/Software/Shellcode/](https://seedsecuritylabs.org/Labs_20.04/Software/Shellcode/)
- Complete and document all steps described in this lab
- See sample submission, the second document
